

JOINT CARDIAC SURGICAL MEETING

MONDAY 17TH MAY 1993

PRESENT Dr Joffe Mr Dhasmana
 Dr Martin
 Dr Wilde
 Dr Fenwick

DANYELE RUDGE HSJ
DOB 11 11 92 1394855

DIAGNOSIS: TGA plus PDA

The echo and catheter findings were reviewed. These confirm the presence of transposition with intact ventricular septum and a small PDA. Aortic saturation was 78% and there is mild subpulmonary stenosis with a gradient of about 20 mms Hg, which on angiography appeared to be dynamic only with no fixed subpulmonary obstruction.

Mr Dhasmana has accepted this baby for Senning repair and will be seeing parents in outpatients in due course to discuss the operation.

H S JOFFE
Consultant Paediatric Cardiologist
