

INVESTIGATIONS

Echo	22
Catheter	10 (2 without echo)
MRI	1

ECHO

Correct prediction of anatomy	16/17	= 94%
Incorrect	1/17	= 6%
Inadequate visualisations	5/22	= 23%

Ages 11/12, 17/12, 23/12 5 years, 5 years

Of above - 3 catheterised

- 2 operated on basis of clinical signs and echo exclusion of interruption

CATHETERISATION

Accuracy 10/10 = 100%

Reasons for catheterisation - inadequate echo examination	3
- demonstration of collateral arteries	3
- check on severity/importance of associated lesions	2
-1 AS	
-1 VSD	
- catheter performed previously	2
